SILVERGlide®
Non-Stick
Bipolar Forceps

access
to better Outcomes
**SILVERGlide® Bipolar Forceps**

**SILVERGlide® Keyhole™ Maximum Access**

- **Maximum Access**: choose the length of the tip and style to meet your surgical needs.
- **Maximum Visibility**: micro-gauge tines keep the tissue in view and not the forceps.
- **Maximum Performance**: with proprietary Silverglide® non-stick technology.

Standard two-pin round connector works with most standard foot-switching bipolar electrosurgical generators.

"The (SILVERGlide) forceps do not char or stick and because of this are extremely accurate in their application of energy. They have proven to be one of the best equipment purchases I have made."

– Mark Glasgold, M.D., Highland Park, NJ

**Micro-gauge tines enable optimal tissue manipulation.**

**Premium Guide keeps tips aligned and minimizes scissoring.**

**Handle is designed for balance, comfort and visibility.**

Forces are reusable and can be sterilized using standard steam autoclave cycles with no disassembly required.

  - 6720-155-012 1.2mm tip
  - 6720-155-007 0.7mm tip
  - 6720-155-004 0.4mm tip

- 6.1" (15.5cm) SP Bayonet
  - 6720-155-512 1.2mm tip, angled up
  - 6720-155-612 1.2mm tip, angled down

- 7.0" (18cm) SP Straight
  - 6725-180-420 2.0mm angled tip
  - 6725-180-010 1.0mm tip
  - 6725-180-007 0.7mm tip
  - 6725-180-410 1.0mm angled tip

SILVERGlide® Accessories

- Sterilization Trays:
  - 6700-010-000 10 piece sterilization tray
  - 6700-005-000 5 piece sterilization tray
  - 6700-002-000 2 piece sterilization tray

- Other accessories:
  - 6700-000-000 Polishing Cloths (50/pkg)
  - 6700-000-001 Tip Guards (100/pkg)

- 6700-000-000 Disposable Cable: (50/pkg)
  - Unique SnugShield feature facilitates a secure electrical connection
  - Sturdy PVC rubber wire

- 6700-000-000 Reusable Cable:
  - Sturdy silicon rubber wire
  - Unique SnugShield feature facilitates a secure electrical connection

The Guidestop on SP models keeps tips aligned, minimizes scissoring and aids in overall dissection.
What makes SILVERGlide® non-stick bipolar forceps so unique?

The key uniqueness of SILVERGlide® is the optimal elimination of tissue buildup and sticking to the forceps tips. This reduces the need to stop and scrape the tips clean and allows the surgeon to work uninterrupted, focusing on the surgical procedure. A quick wipe with a moistened surgical sponge during the procedure keeps the forceps tips clean and ready to use. Because the forceps tips remain clean, lower power settings may be used to achieve the desired surgical effect.

How does the SILVERGlide® Technology work?

SILVERGlide® is a proprietary technology that reduces the molecular bonding force and eliminates hot spots on the forceps tips. In fact, the level of thermal diffusivity of the SilverGlide® alloy is 37 times higher than that of stainless steel commonly used in standard forceps. Laboratory testing and field experience have shown that the non-stick characteristics of SILVERGlide® forceps are as good after multiple uses as they were the first time they were used.

How SILVERGlide® eliminates sticking

Separate fluid and electrical connectors accept a greater variety of cord-tubing sets.

Platform tips facilitate better visibility

“Hot Spots” from sparks occur during coagulation

The “Hot Spots” cause localized sticking

Heat is diffused rapidly to prevent sticking

The forceps can be removed without tissue sticking

“Hot Spots” start to occur during coagulation

Tissue seared to the forceps tips is ripped away

Separate fluid and electrical connectors accept a greater variety of cord-tubing sets.
